

The Gyrodata Advantage

Superior technology provides a clear picture of competitor's (in)accuracy

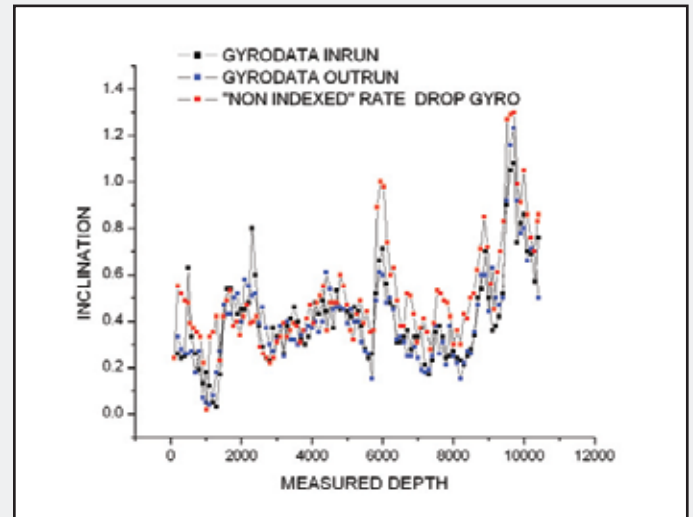

What happened?

A survey produced by one of our competitors was questioned by the client.

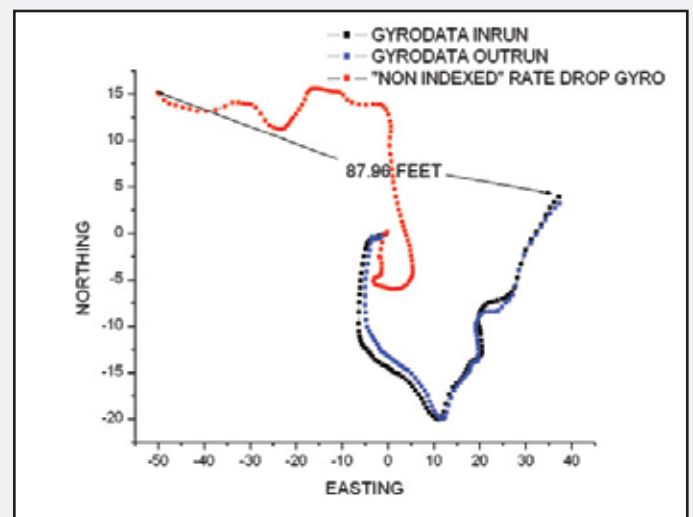

Gyrodata was brought in to resurvey the well, which brought to light several inconsistencies in the previous survey.

The plots provide an excellent example of the difference between technologies.

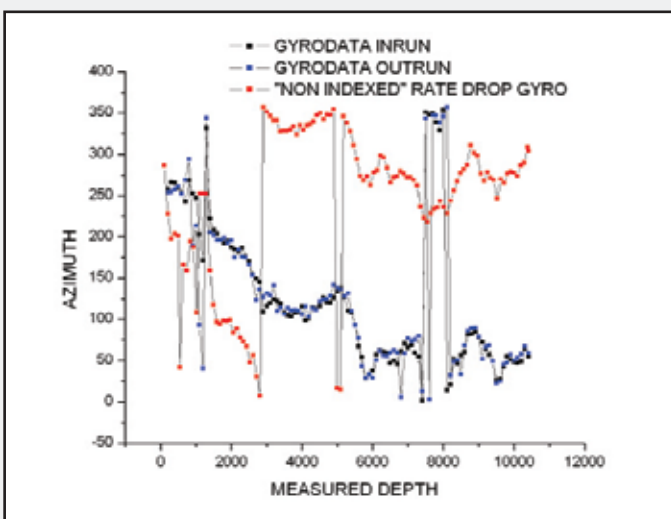

As shown in the plots, it becomes obvious:
Not all Rate Gyros are created equal!

Inclination vs Measured Depth

Northings and Eastings

Azimuth vs Measured Depth
